Table 1. One-way ANOVA on the effectiveness of CRM software when described by years of experience.

Group Descriptives

	Years of Experience	N	Mean	SD	SE	F	df1	df2	p
Effectiveness of CRM Software	1-3 years	87	3.39	0.798	0.0855	1.75	4	33.8	0.162
	4-6 years	58	3.53	0.821	0.1078				
	7-10 years	30	3.73	0.640	0.1168				
	Less than 1 year	19	3.26	0.806	0.1848				
	More than 10 years	7	3.57	0.787	0.2974				

Table 1 presents the test of differences based on years of experience on the effectiveness of CRM software. It was revealed that there is no statistical evidence showing significant difference on the effectiveness of CRM software, $F(4, 33.8)=1.75$, $p=0.162$.

Table 2. One-way ANOVA on the effectiveness of CRM software when described by age group.

Group Descriptives

	Age Group	N	Mean	SD	SE	F	df1	df2	p
Effectiveness of CRM Software	18-24	30	3.13	0.860	0.1571	2.14	4	28.4	0.101
	25-34	109	3.48	0.753	0.0721				
	35-44	35	3.66	0.725	0.1226				
	45-54	21	3.71	0.717	0.1565				
	55 and above	6	3.33	1.211	0.4944				

Table 2 presents the test of differences on the effectiveness of CRM software based on age group using one-way ANOVA. It was revealed that there is no statistical evidence showing significant difference on the effectiveness of CRM software, $F(4, 28.4)=2.14$, $p=0.101$.

Table 3. One-way ANOVA on the effectiveness of CRM software when described by highest level of educational attainment.

Group Descriptives

	Highest Level of Education	N	Mean	SD	SE	F	df1	df2	p
Effectiveness of CRM Software	Bachelor's degree	78	3.44	0.749	0.0848	3.78	4	9.24	0.044
	Diploma	4	3.25	0.957	0.4787				
	Doctorate	11	3.91	0.302	0.0909				
	High school	3	3.67	0.577	0.3333				
	Master's degree	105	3.47	0.844	0.0824				

Table 3 presents the test of differences on the effectiveness of CRM software based on highest level of educational attainment using one-way ANOVA. It was revealed that there is enough statistical evidence showing significant difference on the effectiveness of CRM software, $F(4, 9.24)=3.78$, $p=0.044$.
